New DNA plasmid comprising a T-DNA comprising an Agrobacterium Ti pla first border region linked to a transgene linked to an Agrobacterium plasmid second border region, useful for enhancing production of
                                                                                                                                                                       transgenic plants.
```

Example 1; SEQ ID NO 3; 77pp; English.

The present invention relates to a DNA plasmid comprising a transfer DNA (T-DNA) comprising an Agrobacterium Ti plasmid first border region linked to an Agrobacterium Ti plasmid second con transgene linked to an Agrobacterium Ti plasmid second border region, and located in the DNA plasmid outside of the T-DNA is a plant expression cassette comprising a plant cell non-lethal negative selectable marker gene linked to a vector backbone DNA. Also disclosed are a method for enhancing the selection of transgenic plants that do not contain vector backbone DNA, a method for reducing the copy number of a transgene in a plant cell, and a transgenic plant produced by the method. The DNA plasmid comprises the expression cassette comprising a promoter that functions in plant cells operably linked to a plant cell non-lethal negative selection marker gene. The promoter expresses the linked non-lethal negative selection marker gene. The promoter expresses the linked non-lethal negative selection marker gene constitutive promoter. The promoter expresses the linked non-lethal negative selection marker gene of selectable marker gene comprises a plant hormone unitable that calivering gene or signalling gene, or metabolic interference comprises a transgene is a plant positive selectable marker gene selected from gibberellic acid pathway genes. The transgene of agronomic interest. The plant hormone comprises a transgene of agronomic interest. The plant hormone comprises a transgene of agronomic interest. The plant hormone comprises a transgene of agronomic interest. The plant hormone comprises a plant positive selected from gibberellic acid pathway genes, ethylene pathway genes, ethylene pathway genes, ethylene pathway genes, and herbidial selection for commercially viable transgenic pathway genes. The plasmid is useful for enhancing the production of commercially viable transgenic pathway energies a plant positive selectable marker genes electable marker genes electable marker genes electable marker genes electable marker genes ele The sequence is used as a non-lethal negative selectable 2-oxidase.

This sequence represents cDNA encoding a runner bean gibberellin (GA) 2-
coxidase, PcGAZOXI. This enzyme is a GA 2-beta-hydroxylase that acts on
C19-GAs and for which 2-beta-hydroxylation is the only activity.
C19-GAS and for which 2-beta position of a GA results in a biologically
inactive product, and is the most important route for GA metabolism in
C2 plants, ensuring that the active hormones do not accumulate in plant
C3 plants. The nucleic acids can be used to transform plants so that
C4 tissues. The nucleic acids can be constitutively over-expressed or otherwise
C5 gibberellin 2-oxidase can be constitutively over-expressed or otherwise
C6 gibberellin 2-oxidase can be constitutively over-expressed or otherwise
C7 character of inhibit plant growth applications such as enhancing lodging-
C8 gircultural and horticultural applications such as enhancing lodging-
C9 agricultural and horticultural applications such as enhancing lodging-
C9 cresistance and grain yield in cereals, improving seedling quality,
C8 and ornamental trees, improving tolerance to cold, drought and infection,
C9 and increasing yields (by the diversion of assemilates from vegetative to
C8 and increasing yields (by the diversion of assemilates from vegetative to
C8 and increasing yields (by the diversion of seeds and reduce shoot
C9 cardox female sterility (by expression in floral organs), prevent pre-
C9 harvest sprouting, reduce shoot growth in hedging plants, inhibit
C9 creversibility in the development or gerwination of geeds and reduce shoot
C9 caids can also be used to transform plants to reduce the expression of GA
C9 caids can also be used to transform plants to reduce the expression of GA
C9 caids can also be used with growth, (e.g., to improve fruit set
C9 caids can also be used valuation growth, (e.g., to improve fruit set
C9 caids can also be used valuation and pranty and rhusers
C9 caids can also be used valuation and pranty and rhusers
C9 caids can also be used or transform the captered by the reduce the expression of GA
C9 coxid

                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a gibberellic acid 2-oxidase 1 protein describes methods is used in the method of the invention. The specification describes methods for the inhibition and control of gibberellic acid levels. Gibberellic acid levels dibberellic acid levels achieves of controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin biosynthetic pathway sequence, diverts substrate from the pathway, or degrades pathway substrates or products. The methods uses copalyl diphosphate synthase, 3beta-hydroxylase, 2-oxidase, phytoene synthase, C-20 oxidase, and a 2beta,3beta-hydroxylase polymucleotides to achieve this. The method is used to control seed genemination and seedling growth especially to regulate gene products of gibberellin biosynthetic pathway and restoration of normal seed genemination, in transgenic plants. The plants produced are gibberellin deficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 LysAspArgAlaGlyProProAspProPheGlyTyrGlySerLysArgIleGlyProAsn 100

                                                                                                                                                                                                                                                                                                                                            ઠ
                                                                                                                                                                                                                                                                                                                                                                             The invention relates to control of gibberellin (GA) levels in plants.

The method involves producing transgenic plants having a phenotype of reduced seed germination and reduced early seedling growth, then restoring seed germination and early seedling growth by treating plants with an appropriate compound when conditions are favourable. The method is useful to control seed germination and/or early seedling growth in gricultural production so that unfavorable environmental conditions normally reducing agronomic output can be avoided and yields increased. Plants also demonstrate increased uniformity of germination, emergence and seedling vigor, so increasing yields at harvest. The method is especially useful in crop plants such as e.g. canola, soybean, cotton, etc., and is also useful in storage and transport of seeds to reduce premature germination which may affect agronomic or food quality of the seeds. The present sequence is soybean GA 2-oxidase I CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LyshapargalaGlyProProAspProPheGlyTyrGlySerLysArgIleGlyProAsn 100
